

Trillium Consulting Data Governance Solutions Overview

Deriving the most business value from any enterprise-level data quality or data management initiative requires a best-fit data governance strategy, even at the most rudimentary level. Whether your company's strategy is built upon MDM, CRM, EDW, enterprise data quality, or other data management platforms, adopting and implementing a data governance program is mission-critical to achieving consistent, accurate, and cost effective results around company data.

A formalized data governance discipline is the linchpin that not only drives change management but also orchestrates and oversees activities among lines of business, people, processes, and technologies to realize desired outcomes around data assets. Trillium Consulting leverages expertise and experience to optimize data quality strategies and develop comprehensive, affordable, proven, and highly successful data governance programs that fit any size organization in any industry.

Data Governance Approach

We draw on our many years of experience in the data management space to take a practical, enabling, and cost effective approach to data governance. Our model is practical in the sense that it focuses on helping companies achieve success in areas where organizations are known to struggle around data governance. It is enabling in that it provides the right level of assistance at the right time and for the right reasons to ensure that organizations can be successful on their own merit without reliance on third parties.

Benefits and Features of a Trillium Consulting Data Governance Initiative

- Low cost of entry and low total cost of ownership
- Client enabling which reduces ongoing/long-term reliance on third-party assistance
- Modular/flexible approach allows companies to get help where they really need it most
- Our practical vs. overly academic approach drives real world results
- Accelerate speed to implementation and return on investment (many engagements measured in weeks, not months and years)
- Highly experienced consulting team (all industries, large/mid-size, multi-national organizations)
- A sustainable and effective data governance platform

Data Governance Solutions

Data governance solutions delivered by Trillium Consulting are flexible and modular to meet the specific requirements of any size organization and are devised to address every phase of the data governance life cycle. So whether your organization is just beginning a data governance process, is in mid-stream, requires implementation assistance, or simply needs to jump-start an existing program, Trillium Consulting offers a number of solutions to meet your data governance needs.

The modular design of these services enables us to modify deliverables and package together targeted solutions to meet specific corporate requirements.

Trillium Consulting - Data Governance Services		
Phase	Service Offering	Brief Description
Discovery & Awareness	Data Governance Assessment	Identifies and makes recommendations around common and frequently hidden opportunities, risk, and gaps between existing and potential DG operations.
	Business Value Assessment	Reveals the overall business impact that a data governance program can bring to the organization from a financial, operational, risk mitigation, and cultural perspective.
	Data Quality Audit	Provides quantifiable evidence of the condition of company data which in turn supports the business case for data governance and enterprise data quality.
	Data Governance Workshop (for Stakeholders)	Focuses on delivering education, awareness, and high-level strategy and planning services for data governance initiatives.
	Executive/Business Leader Support Services	Secures support and participation of executives and business leaders via education and demonstration of business value to the company.
Strategy, Planning & Program Development	Program Development	Provides detailed assistance with strategy, planning, program development, and implementation to include scope, definition, structure, roles, responsibilities, stewardship, charter development, awareness, communication plans, data standards development, project planning, organizational alignment, meeting management, and more.
Implementation	Program Management Services	Provides industry experience and program leadership during the early to mid phases of the implementation.
	Organization/Functional Alignment Services	Focuses on coordinating people, process, and lines of business in support of the data governance initiative.
	Meeting Management Services	Leads data governance meetings to establish active participation, a results-oriented environment, and accountability.
	Data Governance Workshop (for Stewards & Participants)	Focuses on delivering education, awareness, and training around data governance, stewardship, and the organization's data governance program.
	Ad-hoc Advisor Services	Supplies industry expertise and insight into ongoing data governance meetings and initiatives to help guide organizations as well as keep program momentum moving forward.
